

## Curved pool slides PSR-180, PSL-180

- Fiberglass-polyester material.
- Antislipping step surface.
- Support base underneath the sliding-surface-part (slide-body).
- Two water nozzles sprinkling water along the sliding surface.
- Tall side ramps aside the slide for extra safety.
- Aluminum, epoxic painted handrails with white colour.
- Easy and fast installation.
- Body slide in light blue colour.
- Height : 1,80 m.

Model	Description	Height mm
PSR-180	Right hand curved design	1800
PSL-180	Left hand curved design	1800

## INSTALLATION INSTRUCTIONS

The installation of our pool slides is very easy. You do not need any special instructions or technical drawing, however I'm inclosing a drawing with some figures and describe the steps you can take to place the pool slide to your swimming pool.

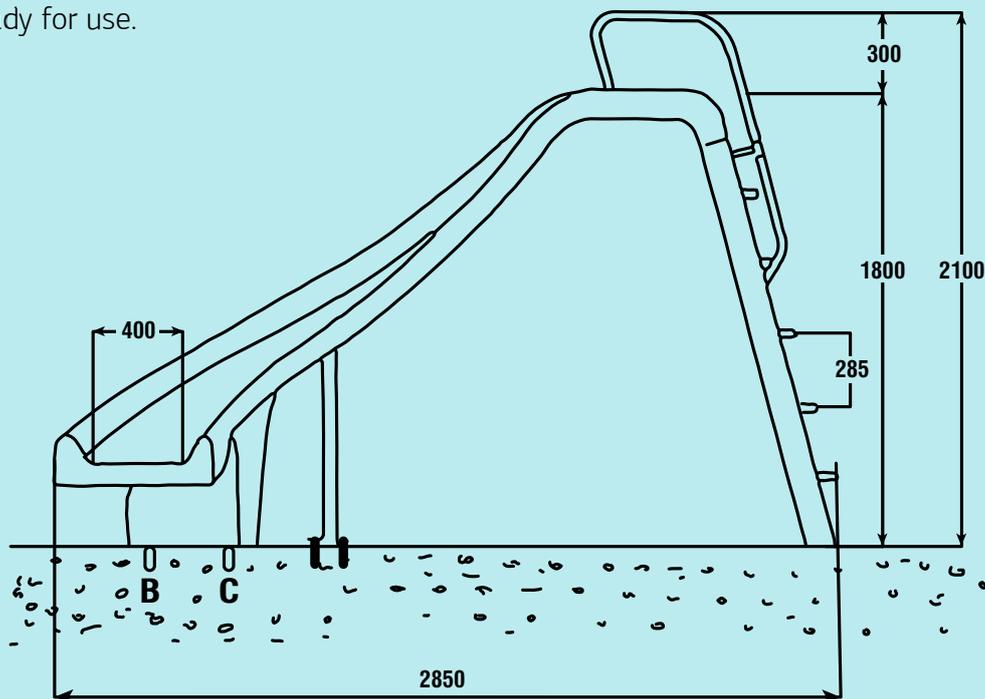

You connect the slide's body to the ladder at the obvious connection point using the supplied screws and bolts.

Then you place the slide at the desired part of the swimming pool and you mark on the floor the position B & C. You put upat connections and with the respective screws you stabilize the slide on these positions.

At the curved part of the slide there are S.S. bases and one S.S. column. You put it at the obvious position. You will notice that the length of this column is longer than it should be. You will drill a hole on the floor and the extra part will be installed in there leaving the right length of the column standing outside it. Use cement to stabilize it. By this way the slide will be completely stable.

At the bottom of the slide there is a small transparent pipe. You adjust this on a water tap so that the incoming water sprays the slippery surface of the slide.

The slide is ready for use.
